@karpathy
There's a new kind of coding I call "vibe coding", where you fully give in to the vibes, embrace exponentials, and forget that the code even exists. It's possible because the LLMs (e.g. Cursor Composer w Sonnet) are getting too good. Also I just talk to Composer with SuperWhisper so I barely even touch the keyboard. I ask for the dumbest things like "decrease the padding on the sidebar by half" because I'm too lazy to find it. I "Accept All" always, I don't read the diffs anymore. When I get error messages I just copy paste them in with no comment, usually that fixes it. The code grows beyond my usual comprehension, I'd have to really read through it for a while. Sometimes the LLMs can't fix a bug so I just work around it or ask for random changes until it goes away. It's not too bad for throwaway weekend projects, but still quite amusing. I'm building a project or webapp, but it's not really coding - I just see stuff, say stuff, run stuff, and copy paste stuff, and it mostly works.

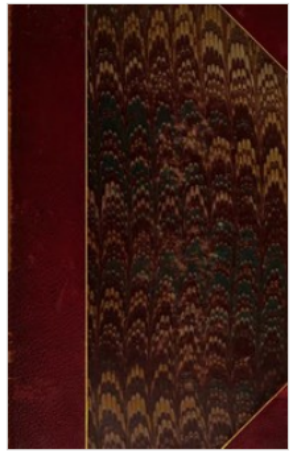
Facts and Speculations on the Origin and History of Playing Cards by Chatto



"Facts and Speculations on the Origin and History of Playing Cards" by William Andrew Chatto is a historical account written in the mid-19th century. The book explores the intriguing history, origin, and cultural significance of playing cards, delving into various theories and speculations regarding their development and use across different societies. It examines not only the gameplay itself but also the evolution of card design and its moral perceptions. The opening of ... Read more

More importantly, in the appendix he lists:

> Lambert Daneau's *Liber de Alea* (1579)
> Cotton's *Compleat Gamester* (1674)
> Seymour's *Court Gamester* (1720)

all of which discuss games where the trump suit is central.

4. Trumping was already an established concept by the 1500s

Chatto never writes as if trumping were a recent invention.

Whenever he discusses:

- Ombre
- Ruff and Honours
- Five Cards
- Whist
- Trappola
- Tarocchi/Tarots

the idea of a superior suit already seems fully established.

In other words, by the sixteenth century the concept was already mature and widespread.

5. The most interesting thing Chatto noticed

here is my mocup for the book and the binder say I can ship straight to them

Looking into it...

Message Copilot

AI-generated content may be incorrect

ENG NO 01:44 06.10.2026

Looking at it as a storytelling object, I can imagine:

♠ Ace of Spades → taxation and duty stamps

♥ King of Hearts → the "suicide king" tradition and evolving card iconography

♦ Knave → Chatto's Four Knaves discovery

♣ Another historical theme from the book, perhaps tarot or early German cards

That is what elevates the design beyond decoration. The symbols are not random. They become chapter markers for stories contained within the text.

My only design observation is that the mockup already contains enough visual interest. I would resist the temptation to add too many separate images. The combination of:

- two court cards,
- suit symbols,
- title panel,
- tax stamp,

already gives the eye plenty to explore.

Overall, I'd rate the concept **9/10 as a custom Chatto binding**. It feels scholarly, thematic, and collectible, while still looking like a nineteenth-century leatherbound book rather than a modern illustrated edition. The idea of embedding the Ace of Spades, the King of Hearts, the Knave, and the suit symbols directly into the binding is exactly the kind of thing that makes a custom-bound collector's copy feel unique.

PLAYING CARDS.
traverses then undergo a similar operation at a smaller pair of gauge-scissors, where they are cut up into single cards, to the amount of thirty thousand daily.
"All that now remains is the making-up into packs. After assorting the cards, the workman begins by laying out on a long table a given number (say two hundred) at one time; he then covers these with another suit, and so on consecutively until he has laid out all the cards that constitute a pack; so that by this operation two hundred packs are completed almost simultaneously. The best cards are called Moguls, the others Harrys, and Highlanders,—the inferior cards consist of those which have any imperfection in the impression, or any marks or specks on the surface.
"It may be necessary to remark that the Aces of Spades are printed at the Stamp Office, whether the cards be for exportation or for the home market,—the paper for printing being sent to the Stamp Office by the maker; and an account of the number of aces furnished by the Stamp Office is kept by the authorities. Before cards are delivered by the manufacturer an officer is sent to seal them, and a duty of a shilling per pack is paid monthly for those that are sold for home consumption. But as they are not liable to duty when intended for exportation, the card-maker enters into a bond that they shall be duly shipped, and an officer is sent to see them put into the case, and to seal it up."

can you find 5 more? did he travel to france for instance to look at cards in museum there, what about the hand painted cards in the book, where are they from

Reasoning completed in 3 steps ›

Yes, there are at least five more strong examples. The key correction is important: **I found no evidence that William Andrew Chatto travelled to France to inspect the Paris cards personally.** His book instead shows that he worked through French publications, correspondence with Paris specialists, published facsimiles, London collections, dealers, and objects lent or sent to him.

Did Chatto travel to France?

I cannot verify that he did. The biographical sources I found describe his life in northern England and London, but do not record a French research journey. wikisource

More importantly, Chatto explains how he accessed French evidence. He says that some of his observations came from Michel Hennin Duchesne's published work and from:

> "a letter written by Mons. Paulin Paris, assistant keeper of the MSS. in the Bibliothèque du Roi, in answer to certain queries submitted to him through a friend of the writer."

That sounds like **research by correspondence**, not personal inspection in Paris.

For the painted cards, Chatto explicitly says that he ju d them:

Research me

2. Store them in a Word memory

2. S… Word me…

The request

Kortleksmuseet:

"Det är nog knappast någon som har läst boken. Men en del journalister som skrev om spelkortens historia under 1800-talet hade säkert Chatto som källa."

("There are probably hardly any people who have read the book. But some of the journalists who wrote about the history of playing cards during the nineteenth century almost certainly had Chatto as a source.")

Kortleksmuseet:

"Jag tycker att du kan redovisa vad som har varit intressant för dig. Att förstå hur Chatto kom fram till sina fakta är också intressant."

("I think you can present what has been interesting to you. Understanding how Chatto arrived at his facts is also interesting.")

Ståle Hansen:

"Jeg vil tro det, den er en bok som ikke er så vanskelig å lese, ikke bare oppramsing av fakta."

("I would think so. It is a book that is not particularly difficult to read, not just a listing of facts.")

Ståle Hansen:

"Jeg er jo helt ny til korthistorie, så alt var spennende for meg 🙄 men lager gjerne et foredrag, du tenker på eventet i Malmö?"

("I am completely new to playing card history, so everything was interesting to me, but I would be happy to give a talk. Are you thinking about the event in Malmö?")

The abstract
Facts and Speculations: Chatto's View of Playing Card History in 1848
Ståle Hansen is a playing card enthusiast who discovered the history of playing cards in January 2026 through his first edition of Facts and Speculations on the Origin and History of Playing Cards (1848) by William Andrew Chatto.
He will share:
• How Chatto researched playing card history in the mid nineteenth century
• What Chatto believed about the origins and spread of playing cards
• Fascinating facts, observations, and speculations from the 1848 edition
Followed by a 10-minute discussion.
While new to playing card history, Ståle Hansen is an internationally acclaimed public speaker and Microsoft Office Servers and Services MVP with extensive experience speaking at conferences and events worldwide. His perspective combines the curiosity of a newcomer with a close reading of one of the nineteenth century's most influential works on playing card history.

based on the networked antiqurian and his research methods, please help me write a prompt to generate a picture in the style of a 1800 london illustrated drawing with chatto in the middle, the brithsh museum behind him and the other methods around him

Absolutely, here is a strong image-generation prompt for that concept:

Prompt:

Create an illustrated scene in the style of a mid-1800s London antiquarian engraving, with fine ink linework, hand-coloured washes, aged paper texture, and the atmosphere of a Victorian historical journal illustration.

At the centre stands William Andrew Chatto as a thoughtful nineteenth-century scholar and antiquarian, dressed in dark Victorian clothing, holding an open book of playing-card history. Behind him rises the British Museum in London, drawn in accurate neoclassical form, slightly misty and monumental, suggesting it as the centre of knowledge and collections.

Around Chatto, arrange visual symbols of his research methods like a circular web of evidence. Include old playing cards and the four French knaves, a bound medieval book with exposed boards, letters and folded correspondence to Paris, a magnifying glass, facsimile plates, printed books, auction catalogues, a legal statute scroll, an ornate Ace of Spades tax stamp, and a small table with ink, quill, and notes. Thin connecting lines or ribbons should link these objects back to Chatto, showing him as a “networked antiquarian”, gathering evidence through objects, books, museums, correspondents, laws, collectors, and reproductions.

The mood should be scholarly, mysterious, and historical, not fantasy. Use sepia, muted blue, faded red, parchment cream, and dark ink tones. Make it look li n illustration from an 1840s London publication, detailed, elegant, slightly worn, and suitable as a presentation title slide about Chatto’s research methods
